NFT MARKETPLACE

Introduction

NFT Marketplace is a platform for buying, selling, and trading one-of-a-kind digital assets. The platform is built with the most recent front-end technologies and has a user-friendly interface for ease of use.

Functionalizes

- Listing of unique NFT assets.
- List previous bids and place your own bid for a particular NFT(s).
- Buy an NFT using 3 popular blockchains (Bitcoin, Ethereum, Polygon).
- Integrating email system.

Working

- When we run the project, a homepage appears which has all the NFT(s) listed on it.
- For each NFT, a user has two options: -
  i) Place a bid.
  ii) Buy directly at the listed price.
- If we click on place a bid, a pop-up will appear in which we can enter the value and enter.
- On clicking buy, we can choose the blockchain in which we want to pay and the QR code of that blockchain will be displayed, on which we have to pay and we will get the NFT within 5 mins.
